Patient Information: Topical PUVA

Introduction

This leaflet provides you with a brief overview of topical PUVA. It is your responsibility to ensure you have read the leaflet in order to assist the effectiveness and safety of therapy. Please ask your clinician any additional questions if you require any more information.

What is PUVA?

Phototherapy is the term used for light treatment. Natural sunlight contains a range of wavelengths or rays. PUVA is a treatment using UVA rays (mainly 320-400 nm) emitted by an artificial source, such as lamps or light tubes in a cabinet, and a medication, in gel paint or soak form, known as psoralen which causes the skin to become more sensitive to ultraviolet light. The advantage of this is it penetrates deeper into the skins layers and is used to treat a variety of skin disorders e.g. psoriasis, eczema, mycosis fungoides. Psoralen is not prescribed to pregnant ladies as the effects of it on an unborn child are unknown. Birth control should be used during the PUVA therapy, including men receiving treatment, and if you become pregnant during treatment inform the clinical staff immediately. It is also advised not to breast feed whilst having treatment with psoralens as again it may pass to the child in the mother's milk. However the benefits of gel/soak psoralen are a reduction in side effects as experienced with psoralen tablet medication, and localised treatment.

If you spill some of the soak neat on your skin or touch another area of skin not to be treated inform your clinician immediately as this increases the risk of burning or blistering from both the natural sunlight and your treatment.

What happens when I start PUVA treatment?

Each follow up appointment lasts 10-15 minutes. The first treatment will only be a short time, about 40-90 seconds. The treatment will then gradually increase in time as the dose increases at each treatment session. This treatment is given 1-2 times a week, therefore treatment lasts for about 6-12 weeks. Generally 16-24 treatments are given but this varies for each person depending on how your skin and skin condition responds to treatment.

What should I do before the treatment?

DO:

1. Tell your clinician if you have taken any additional medication, or had any of your medication changed. This includes herbal remedies or creams.
2. Wear long sleeved tops and trousers.
3. Bring navy blue or black gloves for your hands and wear closed shoes for feet.

DON'T:

1. Use any products on your skin before having treatment. This includes perfumed substances, aftershave, or cosmetics/make up and topical creams/ointments.

This is because these can make your skin become more sensitive enhancing the action of PUVA and increasing the risk of sunburn reaction.

What happens at the treatment session?

The clinician will check you are happy to have treatment and review your skin condition plus response to any previous treatments. Tell your clinician if you went pink or burnt after the last session as you may notice this the evening or day after treatment but it may longer be seen at the next treatment session. It is very important to report this as it helps to correctly change your treatment dose to prevent further burning. The psoralen gel paint will be applied for about 15-30 minutes or the psoralen soak will be done 15 minutes prior to treatment. It is important you do not touch any other skin areas or these will become sensitised with psoralen. You will then wear special goggles to protect your eyes which must not be removed during treatment and you are advised to avoid staring directly into the light tubes. You may also be given a facial visor and have sun block applied to a small area if localised burning occurred. The clinician will re-check you have the correct clothing and protective items needed then start your treatment. After treatment is completed you are able to wash your hands and feet and advised to apply moisturiser which is provided but you are welcome to bring your own if preferred. It is important to do this as it helps reduce the side effects of skin dryness and itching and removes any skin surface psoralen.

After the treatment session

The next 24 hours your skin remains sensitised by the psoralen therefore you are advised to:

- Continue wearing your navy blue or black gloves and closed shoes in daylight hours. Remember UVA can travel through glass therefore this advice is for indoors as well as outdoors in daylight hours.

During your course of treatment it is also important you:

- **Do** use sun block factor 30+ on treated exposed skin areas e.g. hands
- **Don't** use other sources of UV radiation e.g. such as sun beds, sun lamps, and sunbathing.

Side Effects

Short term side effects from PUVA treatment:

- A sunburn like reaction which could be sore and red up to 72 hours after treatment. This particularly affects those with a fair complexion. If a more severe reaction occurs, i.e. bright red skin, peeling or blistering, contact your clinician, GP or A&E immediately for further advice and treatment. You maybe given a cream to use and your treatment maybe missed or stopped.
- Skin dryness and itching.
- Pruritis can develop known as the 'PUVA itch' but it is not common.
- A prickling sensation in the skin
- Your skin may darken or tan after several treatment sessions.

Long term side effects from PUVA treatment:

- It is reported that about 150-200 treatments will increase the long term risk of aging and skin cancer. Patients with fair skin are more at risk. These guidelines are based on receiving one course of treatment a year. It is very important to attend regularly for treatment to ensure the treatment is as effective as possible for your skin condition.
- Repeated courses of PUVA will age the skin just as natural sunlight does. These changes may include wrinkling, freckles, dryness & thickening of the skin. It is therefore good to regularly monitor your skin and if you have any concerns discuss these with your consultant or G.P who will also be monitoring your skin.
- There is also a theoretical risk of damaging the lens of the eye potentially leading to cataracts but this should be prevented by the correct use of goggles during treatment.

If you miss an appointment without informing us within 48 hours, you will be discharged from treatment. An answer phone is available within the department so please leave your name and telephone number if you are unable to speak directly to a member of staff.

Contacts

For further information please contact the relevant department you attended:

Patient Services Department

It is important that you speak to the department you have been referred to (see the contacts section) if you have any questions (for example, about medication) before your investigation or procedure.

If you have any concerns about your treatment, you can contact the Patient Services Department on 0300 123 1733. The Patient Services staff will be happy to discuss your concerns and give any help or advice.

If you have a complaint and you want it to be investigated, you should write direct to the Chief Executive at Worcestershire Acute Hospitals NHS Trust, Charles Hastings Way, Worcester WR5 1DD or contact the Patient Services Department for advice.

Please contact Patient Services on 0300 123 1733 if you would like this leaflet in another language or format (such as Braille or easy read).

Bengali

“আপনি যদি এই লিফলেটটি বিকল্প কোনো ভাষায় বা ফরমেটে (যেমন ব্রেইল বা সহজ পাঠ) চান, তাহলে এই নম্বরে 0300 123 1733 প্যাসেন্ট সার্ভিসের সাথে যোগাযোগ করুন।”

Urdu

“اگر آپ کو یہ دستی اشتہار کسی متبادل زبان یا ساخت میں چاہیے (جیسے کہ بریل / ایڑی ریڈ) تو پبلیشمنٹ سروسز سے 0300 123 1733 پر رابطہ کریں۔”

Portuguese

“Por favor, contacte os Serviços de Apoio ao Paciente através do número 0300 123 1733, caso precise deste folheto numa língua alternativa ou formato (como Braille / fácil de ler).”

Polish

"Jeżeli pragniecie Państwo otrzymać tę broszurę w innym języku lub formacie (Braille / duży druk) proszę skontaktować się z Obsługą Pacjentów pod numerem 0300 123 1733."

Chinese

"如果您需要此份傳單的其他語言選擇或其他版本
